

A world of complex plastic forming...

Machine Components

Impact-proof, Chemical Resistant, Fire Resistant, Plastic Approved for use with Food

We produce:

- Machine components are produced to order and delivered ready for use in assembly lines in Denmark or abroad.
- The items for the mechanical industry are numerous and for example tubs, lids, covers, screens for chains and gear-wheels, motor housings etc.
- The items for machines are often produced in a high quality impact-proof plastic material.
- A material which can meet all requirements regarding chemical resistance, approvals for use with food, antistatic properties as well as fire resistant properties required in Denmark/USA and other countries.
- Thermoformed items can be produced by vacuum forming machines or by handcraft depending of requirements and quality.
- High quality product is secured by producing in CNC processing equipment in order to get a uniform quality and a perfect finish in every production.
- We produce our own tools for the vacuum forming, or the tools are produced in cooperation with our very capable partners.
- Vacuum forming is often financially attractive when producing prototypes, 0-series and smaller batches. The possibilities are legio, let us assist you in the evaluation of your requirements.
